

The New Energy Future

Ms. Pissawan Achanapornkul

Chairperson, The Shell Company of Thailand Limited

At The ASEAN Leadership Forum

19 June 2009

Outline Topics to be covered

- The starting point for our thinking about the energy future – what we call the “**three hard truths**”.
- Two Energy Scenarios: **scramble** and **blueprints** – Shell’s scenarios study looking into the next 30-50 years – however, not a forecast, but looking into the possible outcomes from decisions we make now shaping the impact on the possibility of the future.
- From two scenarios, Shell proposes to go for one - blueprint, which will bring a more sustainable world than the other. It is difficult but Shell is looking forward to work in collaboration with the world and all stakeholders to go in that direction.
- Shell’s roles towards a new energy future. To coordinate actions in key areas:
 - Energy security
 - Energy diversity
 - Energy efficiency
 - CO₂ management
